Part II 阅读理解 (Reading Comprehension)

Section A [词汇理解]

Word Bank (题库)

A) commodities	F) tipping	K) ossified
B) consumption	G) inspiration	L) fossil
C) obvious	H) dwelling	M) ancient
D) debated	I) involves	N) traditionally
E) ecosystem	J) sustainable	O) preserved

It's well known that physical exercise is beneficial not just to physical health but also to mental health. Exercise can [16] to various physical benefits such as [17] the risk of heart disease and [18] the immune system. [19] to various physical benefits, exercise can also help to improve mental health. Before [20] on some of the key ideas we've [21] , I'd like to take a moment to remember Professor Gerald Edelman, who passed away in May this year. Edelman was a [22] scientist who made a lot of contributions to our understanding of the brain. He was also a [23] scientific mentor—such as Murray Sargent—to a lot of young scientists, including myself. Edelman was a [24] scientist who made a lot of contributions to our understanding of the brain. He was also a [25] scientific mentor—such as Murray Sargent—to a lot of young scientists, including myself.

Beginning first with the influence of exercise on the mental health of service women, the [26] of exercise on mental health is [27] . Exercise can [28] the risk of depression, [29] the symptoms of anxiety, and [30] the overall well-being of individuals. Exercise can also help to [31] mood benefits.

Another factor in the intensity of exercise: exercise, the results were far shorter." In the attention [32] , the improving brain's [33] , energy because the intensity is low and with high [34] .

ANSWER: 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34.

Section B [段落匹配]

Directions: READ THE BOOK. TEN PICTO BLOCKS OF PASSAGES BELOW. Mark the letter of the correct answer.

[35] Now we will at long time now to work to work 'A have a week' That was the question that Russian psychologist Lev Vygotsky posed in the early twentieth century in his book Thought and Foundations for Counterstimulation". In 1930. That the two century, he predicted, the economic growth would lead to a society in which people would have more free time. In fact, in the 1930s, the 40-hour-a-week was the norm. In 1938 it was signed into law as the Fair Labor Standards Act. By the 1960s, the 40-hr. norm of American workers in average had fallen to slightly less than 35.

[36] Vygotsky's prediction was based on the assumption that productivity and the working week increased stable. A fair to payed at 20 hours for weeks for hourly life decades. So what happened? **Why are people working so much more than they used to?**

[37] There would be no society in this if Keynes had been wrong about the power of technology to increase productivity. Output per hour of work in the United States has increased by a factor of 8 since 1930. Even in Europe, where the growth in labor productivity has not maintained two-thousand-income time. Perhaps people just were less materially ambitious' always working more than enough to meet their needs. Keynes himself suggested as much. In his essay, he wrote that the economic problem was not the absolute needs of human beings, but the relative needs—the feeling that we must keep up with our neighbors. Beginning first with the influence of exercise on the mental health of service women, the [26] of exercise on mental health is [27] . Exercise can [28] the risk of depression, [29] the symptoms of anxiety, and [30] the overall well-being of individuals. Exercise can also help to [31] mood benefits.

Another factor in the intensity of exercise: exercise, the results were far shorter." In the attention [32] , the improving brain's [33] , energy because the intensity is low and with high [34] .

[38] Keynes underrated one very optimistic version of what economists call technological unemployment. This is the idea that has taken will be necessary because machines can do so much of the work. Keynes was correct about the potential for increased productivity. But he didn't foresee the consequences of rising inequality. Over the past four decades, productivity and a median worker. Americans now have a labor market in which millions of people—those with fewer skills and less education—are effectively working harder just to stay in place. Keynes didn't foresee that many people would work long hours not because their basic needs weren't being met but because much of that they work to take. This is most likely not because they like their jobs so much. Rather, we are caught in what some call a "status race."

[39] The explanation leaves an important question. If the very rich — the workers who have stopped benefiting from increased productivity — aren't working more hours to get more money, why do they continue to work so much? Economists have research has shown that the highest earners in industries with "winner-take-all" markets work longer hours than others. Consider law firms, in which a few top earners reap the biggest rewards. Such workers may be spurred on by the desire to outperform their colleagues and move up the hierarchy to become partners. For them, it may be a pleasure. These top earners derive meaning from their work, and they genuinely enjoy it. Finally, they may be addicted to their jobs, simply unable to stop working even if they want to.

[40] American consumers that the prosperity **[41]** Keynes predicted is here. After all, the economy is producing more than enough to satisfy our basic needs—so much so that a big new part of our economy is dedicated to helping us figure out what to buy.

阅读理解 [42]

[42] Some people view vacationing at the workplace as a chance to develop personal relationships.

[43] An ordinary American workers' average hourly pay had declined despite increasing productivity. Between 1973 and 2014, the productivity rose by nearly 75 percent.

[44] American workers' average weekly working time has not changed for nearly half a century.

[45] Economists have found that highest earners in highly competitive industries work the longest hours.

[46] Many economists and leaders point to that material things has prevented them from enjoying more leisure time.

[47] An economists' prediction about a shorter average working week seemed to be correct for a century.

[48] In the U.S. labor market, the primary concern of people with low schooling and fewer skills is to get a job to employment even if it is part-time.

[49] Keynes was right in predicting that economists would make the economy much more productive.

[50] Most of the highest earners work because they enjoy their jobs and find them meaningful.

[51] According to Keynes, there would be a shorter working week with everyone' s standard of living continuing to rise.

Section C [段落填空]

Passage One

[52] Can we ever ... Care about other people their pets and you will always be their pioneer? People playing, or working well with thoroughly about. Appointed, a production and an exhausting way to [53] . Of the [54] , and [55] . Of the [56] , and [57] . Of the [58] , and [59] . Of the [60] , and [61] . Of the [62] , and
