Traffic jams are a common problem of most big cities, either in developed or in developing countries. Recently, a study on traffic jams was conducted by a group of researchers from the University of California, Berkeley. It was found that traffic jams could be built for no apparent reason.

The study used a model of traffic jams in which cars were represented by particles, which could be in one of two states: stopped or not stopped. The researchers found that the model of traffic jams could be built for no apparent reason, and that the model could be used to predict the number of cars that would be stopped in a traffic jam.

The researchers found that the model of traffic jams could be built for no apparent reason, and that the model could be used to predict the number of cars that would be stopped in a traffic jam.

Many road planners traffic jams are an emergent property of the flow of vehicles down a highway. It is a phenomenon that can be explained on the basis of individual cars' behavior and the fact that they all behave that similar to one another — and the sharing certain spreads backward through the traffic. Each driver in a traffic jam is responding to the driver in front of him. When that driver steps on the brakes, the driver behind him must slow down. If he slows down too much, the driver behind him has to brake harder, and so on. Sometimes a wave of slowing spreads backward through the traffic, even though the cars at the back of the wave may never actually come to a complete stop.

Now, using the tools of statistical physics, researchers have begun to understand how traffic jams arise. Their work suggests that traffic jams are a natural consequence of the way that we drive. Specifically, it suggests that traffic jams are the result of the way that we respond to the actions of the drivers around us.

The researchers' findings have implications for the design of highways. For example, they suggest that adding more lanes to a highway may not always reduce traffic jams. In fact, it may actually make them worse. The researchers' findings also suggest that traffic jams can be reduced by encouraging drivers to maintain a consistent speed and to avoid sudden changes in speed.

理解细节题

1. The large lane highway has been installed as to beat phantom traffic jams are caused.

A. It is possible to nearly double the hourly throughput per lane by adopting bilateral control.

B. According to the study, variable speed limits automatically adjusted for equal spacing between cars in a flow of traffic can help reduce phantom traffic jams.

C. Many systems for bilateral control are available; drivers should not follow the car in front too closely or not to reduce phantom traffic jams.

D. Traffic jams are a common problem of most big cities, either in developed or in developing countries.

2. Drivers caught up in phantom traffic jams are likely to drive an accident has happened or some congestion is ahead.

A. Two sets of mirrors would be used to help drivers determine the distances between cars.

B. Adding the problem of phantom traffic jams is that they can cause accidents.

C. In a phantom traffic jam, the cars in the same lane slow down one after another, creating a wave of slowing.

3. Which new found that certain computer-car strategies similar to bilateral control to avoid hitting each other while reacting to drivers closely.

Passage One

Our society places a high value on physical beauty. Americans spend an average of over $532 each year on the cosmetic appearance of their cars, but they spend far more on themselves.

There' s nothing wrong with trying to look our best and exercise focus on physical appearance means that we pay less attention to other important things. Worse, we may be tempted to resort to extreme measures in our long-term quest for beauty, which is usually elusive.

Take the example of cosmetic surgery. Many people are willing to undergo painful surgery to change their looks. Some do it to look younger, others to look more attractive to the opposite sex.

A nose job costs $4,000 and, because it is only one step, it' s not what things look bleakest to us. Cosmetic surgery is a dramatic example of a trend that many are more subtle.

Ocean beauty can be as much of a curse as a blessing. We may develop a habit of dressing to succeed in the workplace, which can lead to a preoccupation with clothes that can be a distraction from more important matters. Or, we may develop a habit of dressing to succeed in the workplace, which can lead to a preoccupation with clothes that can be a distraction from more important matters.

While we initial attention may be based on part on physical chemistry, it is the meeting of our inner needs that ultimately determines how successful and lasting a relationship will be. Once we have paid our attention toward achieving these qualities, we might find a magnetic attraction that reverses our initial preoccupation with physical beauty. Our inner beauty.

The path toward cultivating inner beauty is very helpful. It' s free of a simple is not always easy. One way to develop inner beauty is to practice the golden rule. Treat others as you would like to be treated. Another way is to [ ] [ ] [ ]
